VAT in Saudi Arabia

When a VAT-registered business sells a good or service, it charges – assuming a standard case – an extra 5% of VAT on top of the sales price. The business will account for that 5% from all eligible sales separately from its revenue in order to later remit a portion of it to the government. The VAT that a business collects on its sales is called Output VAT. That same business will also pay 5% VAT on top of the goods or services purchased from other taxable businesses. The VAT that a business pays to its suppliers is called Input VAT. In order to calculate how much they owe to GAZT, each business will note how much VAT it has collected from customers and subtract from it the total VAT it paid in the same period.

(source : <https://www.vat.gov.sa>)

See the table below to see how this calculation might look in the electronics store example:

Electronics store example – VAT calculation

VAT transactions	Price per unit (before tax)	Tax per unit	Units bought/ sold	Total tax	Tax name
TVs bought from manufacturer	SAR 1,000	SAR 1,000 x 5% = SAR 50	100	SAR 50 x 100 TVs = SAR 5,000	Input VAT
TVs sold to customer	SAR 1,200	SAR 1,200 x 5% = SAR 60	100	SAR 60 x 100 TVs = SAR 6,000	Output VAT
VAT owed to government	SAR 6,000 – SAR 5,000 = SAR 1,000 Output VAT – Input VAT = VAT due
